DETAILED ACTION

Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance: the closest prior art of record (O'Neil U.S. Patent No. 6134318, Sequeira U.S. Patent No. 6222530, Sundaresan U.S. Patent No. 6289369 and Hull et al. U.S. Pub. No. 2003/0115545) does not teach nor suggest in detail "a system or method for processing tasks including, receiving a plurality of transaction requests at an interactive automatic call distribution;
2. generating a respective transaction event responsive to receiving each of the transaction requests, the transaction event for routing the transaction request to an agent of the automatic call distribution system;
3. responsive to the respective transaction events, identifying a respective workflow associated with each transaction event;
4. assigning a workflow priority to at least one workflow;
5. creating a respective task object for each of the transaction events and identified workflows;
6. assigning a task priority to each respective task object based upon the workflow priority whenever a workflow priority has been assigned to the respective workflow, but otherwise based upon a priority of each respective event;
7. queuing the task objects in a task object queue;

8. distributing a task object of the task objects, which at least partially executes the workflow, from the task object queue to an available thread within a pool of available threads operating within a multiprocessor system based upon the task priority of the task object;

9. identifying a processor affinity attributed to the distributed task object; and

10. assigning the available thread to a processor within the multiprocessor system according to the processor affinity attributed to the distributed task object to rout the transaction request to the agent of the automatic call distribution system,” as argued by the Applicant (see Remarks dated 11/29/2007, pages 10 – 12; Specification as of 07/02/2004, pages 14 – 25; and Drawings dated 07/02/2004, Figures 4 – 9, of Applicant’s enabling portions of the specification and drawings).

11. Neither O’Neil, Sequeira, Sundaresan nor Hull teach, alone or in combination, the claim language as stated above and in the application. More specifically stated by the Applicant, O’Neil dose not teach task objects or the creation of task objects as stated by the claim language and supported by the Applicant’s specification. As noted by the claims and enabled specification, the Applicant's invention starts with a request and generates an event and tasks that correspond to the event all of which have some type of priority that is determined if the event is in a workflow or by itself. O’Neil teaches a call that is queued by their system with a priority appears to be void of a type of workflow that could be associated with the call. Furthermore, there is no generation of an event or task. It could be argued that the call is a task or event but there is still no generation of the missing element, event or task depending on the interpretation of O’Neil’s call. Further deficiencies are seen with O’Neil’s lack of an available thread in a pool of threads further

distinguishes the claimed invention from the prior art. Although, Sequeira teaches a thread pool, which makes up for one of the deficiencies of O'Neil, it does aid in the lack of generation of events or tasks and the priorities that are given to the workflow, events and tasks. Sequeira teaches having a processor affinity attribute but does not teach the task object queue with the priorities utilized in the workflow that is carried over to the task. Although Hull was not utilized in a rejection the art would have been useful in rejecting the application in a 103. The main deficiencies of Hull are the lack of generations of tasks and events with the priority that is accompanied with them. Other deficiencies are the lack of a processor affinity attribute and thread pools that are used to take tasks off the task object queue.

12. The dependent claims further limit the independent claims and are considered allowable on the same basis as the independent claim as well as for the further limitations set forth. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

13. Claims 28 – 48 are allowed.
